PROFILE

Computer Engineering Undergraduate, focusing on Backend Development, Data Analysis and Machine Learning. I have worked on Projects related to Computer Vision with the focus on training ML Models to get the most accurate and useful results. I have experience with Programming Language such as Python, SQL as well as C/C++ with focus on both Functional Programming and Object Oriented Programming.

HARD SKILLS

- Python Backend Development
- SQL Based Queries
- Dashboard Design
- Data ETL Processing
- Templates and Illustration Designing
- Image Annotation and ML Training

SOFT SKILLS

- Team Spirit
- Communication Skills
- Time Management
- Adapting to Change
- Focus and Resilience

EDUCATION

Kathmandu Engineering College

2021-2026

During my time in College I learned various programming paradigm including procedural, functional, object-oriented, query based and logic programming. Along with technical skills, I also developed non-technical skills such as team work and efficient communication techniques. During my studies, I have visited various organizations and fields as Case Study that helped enhance my analysis, awareness and reporting skills.

Some Projects that I have worked throughout my educational period are:

- **TrashNet**

TrashNet is a smart-dustbin made using concepts of Machine Learning, Internet of Things(IOT) and Electronic Engineering. TrashNet has features of Waste Detection, Waste Segregation and Fill Detection done through utilization Computer Vision, Servo Motors and Ultrasonic Sensors respectively.

- **Computer Vision(CV) Based Virtual Keyboard**

CV Based Virtual Keyboard is a software program that allows user to type letters through Gestures detected by Camera. It allows for typing without any interactions with peripherals. Tensorflow and Google Mediapipe was utilized to make this Project.

- **Dashboard Design**

Extraction, Transformation and Loading(ETL)
process for premade data was done with
Snowflake AI Data Cloud and Interactive
Dashboard was made through Tableau. This
project helped me understand the ETL Process as
well as helped me gain experience to work with
.json files.
